

**SPEEDY  
CURBS**

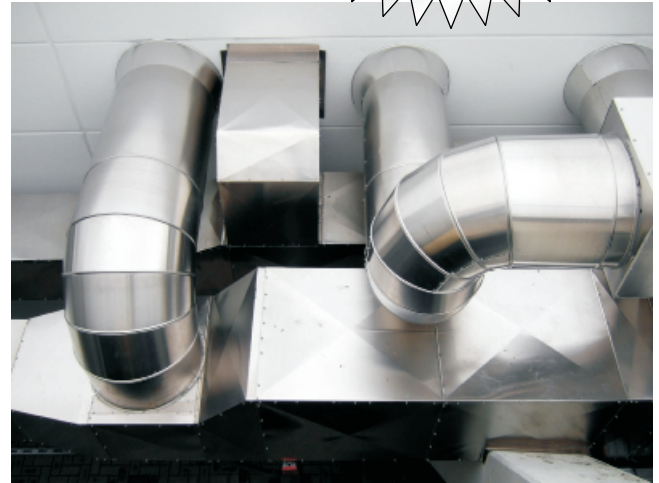

Welcome to the **Royce Company**

Where The Customer Is Always **FIRST**  
And We Get Your Job Out **FAST**.

The Royce Company manufactures ductwork and fittings for wholesale HVAC suppliers and Heating and Air Contractors. We provide a standard product line as well as custom fabrication. You'll find everything you need to get the job done right.

**We SPECIALIZE in Curb Adapters!**

At the Royce Company we want to do everything we can to help you succeed. We are a team driven company and work diligently to match your team efforts. With more than 30 years of experience, Royce is the company you can turn to for the expertise you need to make your own business successful. Your success is our success. We look forward to being a part of your team. Together we can solve problems and provide the highest quality parts and the quickest turn-around time in town.

**Curb Adapter Information**

**What is a curb adapter?**

Often when an HVAC unit is being replaced, the new unit does not identically match the existing curb locations. A curb adapter must be custom made to meet the new unit's specifications.

**What types of HVAC equipment will your curb adapter fit?**

Our curb adapters are custom made for your needs. We can build to fit any brand and any size.

**What information do I need to provide for a curb adapter?**

We will need to know the manufacturer, model number, size, and CFM for both the existing and the new units. We will need information about the existing unit, such as the curb size and if the unit is concentric. We also need information regarding the clearance around the unit, specifically if there are any objects within 2 feet of the unit.

Pre-manufactured rooftop curbs are all custom manufactured to suit individual project requirements. These pre-manufactured products can greatly help to speed installation time by minimizing field assembly needs.

- ★ Fully Welded and Assembled
- ★ Factory Insulated

- Saves installation time and money
- No chance of missing parts
- No field assembly required
- Alleviates the co-ordination problem of providing insulation for the roof curbs by either the mechanical contractor or the roofing contractor. The problem is rarely addressed and roof curbs often go uninsulated causing condensation problems.

A curb adapter is used to match an existing drop location with a new HVAC unit, when a different replacement unit is being installed. This generally requires a custom adapter.

Our curb adapters are all custom made and they can be used to match any brand and size of HVAC equipment to match your project requirements.

Using our pre-manufactured curb adapters greatly minimizes the time required to complete your job.
